I have a modal dialog opened from my NSWindowController. The dialog will be used by multiple users. So I need to keep the NSWindow open and accessible while the user continue to work. How can I do this without loosing modality? In iOS the method called show modalViewController does this for me, but it is not available in Xcode 4.0.2. Thanks for the help A: You can just create a new NSWindowController and instantiate it. It's up to you to decide whether the new controller should be displayed as a modal window or not. It will maintain it's own NSWindow, the window that you create will not become modal. J. T. S. Forsythe Jacob Thomas Smith Forsythe (10 October 1814 – 14 October 1866) was an Irish Whig politician.
